

Applied AI
for Digital Transformation

Generative AI isn't just a tool
—it's a transformative force
that can turn data
into decisions, ideas into
innovations, and companies
into industry leaders.

Generative AI and the New Era of Innovation

This online course, offered by **MIT Professional Education**, explores the evolving landscape of Generative Artificial Intelligence, covering its foundational concepts and examining its wide- ranging applications.

Generative AI is transforming industries with cutting-edge advancements in computing power, deep learning, and data availability. Powerful generative AI tools and pre-trained models such as DALL-E, and GitHub are now more accessible than ever, enabling the solving of complex problems and greater efficiency.

While tools like ChatGPT are widely used, it's essential to understand their limitations, workplace applications, and the ethical challenges that artificial intelligence presents. To fully harness the potential of generative AI, professionals must adapt their roles and approach, balancing the strengths of AI with the human element that remains central to our work.

As this technology continues to shape the future, it drives digital transformation, enhances efficiency, and unlocks new opportunities for innovation. Gen AI is propelling human potential to new heights, empowering progress in ways previously unimaginable.

Measuring the Impact of AI

Generative AI and its cross-industry impact are transforming how businesses operate, and professionals perform their everyday jobs. Mastering generative AI isn't just a competitive advantage anymore—it's the key to innovation, growth, and staying ahead in today's world.

A graphic featuring a large, stylized number '7.9' in a dark red, outlined font. To the left of the '7.9' is the text 'US\$ trillion' in a smaller, dark red font. The background is a light gray with a faint, circular, wavy pattern.

US\$ 7.9 trillion

Generative AI could have an economic impact of up to \$7.9 trillion per year.

About this Course

In this 8-week online program from MIT Professional Education, you'll gain practical skills to harness the power of generative AI and drive meaningful change in your organization.

Learn how generative AI models work, their capabilities and limits, and how to craft effective prompts to achieve high-quality results. Explore how to integrate AI tools and APIs into existing systems and deploy lightweight models locally for efficiency and data privacy. The program also dives into key topics like LLMOps, reinforcement learning, and the ethical and governance considerations crucial for responsible AI use. Through live sessions with MIT faculty and hands-on projects, you'll develop both the technical know-how and strategic insight to lead AI-driven transformation.

8 weeks

8 - 10 hours a week

Online

Course Objectives

- 01 Design** a prioritized AI opportunity map and adoption roadmap with risks, dependencies, and success metrics
- 02 Assess** where GenAI creates value across functions and judge feasibility/ROI for your context
- 03 Apply** prompt-engineering techniques to automate routine executive and team workflows
- 04 Evaluate** ethical risks and map governance requirements to recognized frameworks in your organization
- 05 Distinguish** among core AI capabilities (LLMs, RAG, agents, multimodal, to support informed vendor and solution decisions.
- 06 Develop** a practical AI adoption framework that includes change management and stakeholder alignment
- 07 Analyze** workforce and economic implications to inform org design and competitive strategy
- 08 Explain** the foundations, evolution, and business relevance of generative AI

Course Outline

Module 1: Understanding AI and the Business Impact

- The evolution of AI: from rule-based systems to machine learning to generative models
- What makes generative AI distinct: creating new content rather than predicting outcomes
- Why 2023–2025 marked a major shift in AI adoption and business impact
- How AI is reshaping key sectors: healthcare, finance, retail, media, and manufacturing
- A leadership-focused lens for understanding and evaluating AI
- Setting personal and organizational goals for learning and application

Module 2: How Generative AI Works

- What large language models are, explained without technical jargon
- How inputs, outputs, and context windows shape model behavior
- Why AI hallucinations occur and their impact on organizational use
- How tokens, cost, and model size affect budgeting and deployment decisions
- What multimodal AI enables across text, images, audio, and code
- How leading models differ at a high level and what matters for leadership decisions
- Key warning signs to watch for when evaluating AI vendor claims

Module 3: Prompt Engineering

- What prompt engineering is and why it matters
- Core techniques: zero-shot, few-shot, chain-of-thought, role prompting
- Prompting for executive tasks such as briefings, strategy memos, and stakeholder communication
- Prompting for team tasks including documentation, summaries, and reporting
- Automating routine workflows with reusable prompt templates
- Prompt security and what to avoid sharing in public AI tools
- Hands-on practice to build your personal prompt library

Module 4: AI Across the Organization

- Marketing and CX: personalization, content generation, service automation
- Operations: workflow automation, documentation, procurement, supply chain
- HR and Talent: recruiting, onboarding, learning and development, performance
- Finance: reporting, forecasting, compliance summarization
- Product and Innovation: ideation, prototyping, market research
- Leadership and Strategy: competitive intelligence, board communication, scenario planning
- Case Studies: Klarna, Coca-Cola, JPMorgan and others
- Use-Case Evaluation: assessing value, risk and organizational readiness

Module 5: Ethics, Governance, and Responsible AI

- The ethics landscape and what is at stake when AI makes decisions
- Where bias in AI comes from and how leaders can mitigate it
- Privacy, data sovereignty, and guidelines for employee use of AI tools
- When transparency and explainability are required for auditable AI
- The regulatory environment, including the EU AI Act, U.S. frameworks, and sector rules
- How Responsible AI frameworks from Google, Microsoft, and NIST translate into practice
- Disinformation, deepfakes, and content integrity challenges
- How to begin building an internal AI policy for your organization

Module 6: Building an AI-Ready Organization

- What AI readiness means across technology, data, people, and culture
- Common failure patterns in AI adoption and how to avoid them
- Communicating about AI amid uncertainty and rapid change
- Upskilling your workforce and identifying essential future skills
- Addressing AI-related anxiety and supporting psychological safety
- Roles of the CDO, CAIO, and AI Center of Excellence
- Applying change-management frameworks such as Kotter and ADKAR to AI initiatives
- Building internal AI champions and governance structures

Module 7: The AI-Enabled Economy — Workforce, Disruption, and Opportunity

- The economic impact of generative AI across productivity, displacement, and new value creation
- Which jobs and tasks are most exposed to automation and which remain resilient
- AI augmentation versus replacement and how leaders can apply this distinction
- How AI is reshaping competitive dynamics through first-mover advantage and differentiation
- What AI-native competitors reveal and what incumbents can learn from them
- Global AI investment trends and their implications for sector strategy
- How leadership is evolving and which human capabilities grow in importance

Module 8: Creating An AI Strategy

- Reviewing the strategic AI framework and bringing all concepts together
- Using the AI opportunity canvas to map use cases to business value
- Applying an effort-impact-risk matrix to prioritize AI initiatives
- Building an AI roadmap across quick wins, mid-term initiatives, and long-term transformation
- Crafting the business case for AI investment and making the ask effectively
- Presenting your AI strategy to boards, investors, and skeptical stakeholders
- Capstone workshop to develop and peer-review your organizational AI strategy
- Final reflection on the kind of AI leader you aim to become

Capstone Project

The course includes a capstone project where learners synthesize concepts from all modules into an actionable AI strategy for their organization. Participants develop a prioritized opportunity map, build an adoption roadmap with owners and timelines, and outline key risks, dependencies, and success metrics. The capstone ensures that every learner leaves with a concrete, organization-ready plan that translates learning into practical, strategic action.

APPLY NOW

Real-World and Strategic Application

AI Use-Case Mapping Across Functions

Examples from marketing, operations, HR, finance, and product teams illustrate how GenAI enhances personalization, automation, and analysis. Learners practice evaluating feasibility, impact, and organizational readiness for AI opportunities.

Ethics, Bias and Governance in Context

Real scenarios highlight issues such as bias, hallucination, data exposure, and regulatory obligations. These cases help participants apply governance frameworks and build a practical Responsible AI checklist suited to their organization.

Organizational Readiness and Change Examples

Case-driven insights show why AI initiatives often struggle due to data gaps, ownership issues, or cultural barriers. Learners examine these patterns and use structured models to plan communication, upskilling, and adoption strategies that support successful implementation.

Economic and Workforce Impact Illustrations

Examples from industry shifts help learners understand how automation and augmentation influence roles, processes, and competitive strategy. These scenarios support workforce planning and long-term organizational design.

Industry Examples

The Applied AI for Digital Transformation course features real organizational examples from across industries to deepen your understanding of practical applications and leadership decision-making. These examples help illustrate value creation, ethical challenges, governance requirements, and the realities of deploying AI in modern enterprises.

Examples include:

Note:

All product and company names are trademarks or registered trademarks of their respective holders. Their inclusion is for educational illustration only and does not imply affiliation or endorsement.

Participant Profile

This program is built for professionals ready to explore these possibilities and turn cutting-edge technology into real-world impact. Professionals who may benefit from this course:

Senior leaders charged with informing decisions regarding generative AI initiatives for their organizations.

Technology leaders who want to learn current best practices for adopting and optimizing generative AI systems to boost business outcomes.

Senior managers and mid-career executives who want to gain insights into the potential applications of generative AI within their organizations.

Innovation managers, sales and product managers, and marketing and customer experience professionals who want to learn how to leverage generative AI to create new products, new content, and personalized customer experiences.

Investors in venture capital, private equity, or hedge funds looking to understand investment opportunities created by generative AI.

Prerequisites: No prior background in analytics, computer science, coding or machine learning is required.

Instructors

Prof. John R. Williams

Professor of Information Engineering, Civil and Environmental Engineering and Director of MIT Geospatial Data Center, and a faculty member in the Center for Computational Science and Engineering part of the Schwarzman School of Computer Science

John Williams holds a BA in Physics from Oxford University, an MS in Physics from UCLA, and a Ph.D. in Numerical Methods from University of Wales, Swansea. His research focuses on the application of Exascale computation to problems in cyber-physical systems, security and energy. His work on fault-tolerant computing using container migration won the IEEE, High Performance Extreme Computing Conference award for Best Innovation in 2019. He is Director of MIT's Geospatial Data Center and from 2006-2012, was Director of the MIT Auto-ID Laboratory, where the Internet of Things was invented.

He is an author or co-author of over 250 journal and conference papers, as well as the books on Rock Mechanics and RFID Technology. He contributed to the 2013 report for the UK Office for Science Foresight Project- The Future of Manufacturing. Alongside Bill Gates and Larry Ellison, he was named as one of the 50 most powerful people in Computer Networks. He consults to companies including Accenture, Schlumberger, Shell, Total, Exxon, SAP Research, Microsoft Research, Kajima Corp, US Lincoln Laboratory, Sandia National Laboratories, US Intelligence Advanced Research Projects Activity, Motorola, Phillip-Morris Inc., Ford Motor Company, Exxon-Mobil, Shell, Total, and ARAMCO.

His international collaborations include Oxford and Cambridge Universities, HKUST, KACST, Alfaisal University, PolyU Hong Kong, Imperial College of Science and Technology UK, Malaysia University of Science and Technology (MUST), and Masdar Institute of Science and Technology Abu Dhabi. He organized the first Cyber-Physical Security Conference in the UK (2011) and along with Dr. Sanchez, he runs the MIT Applied Cyber Security Professional Education summer course. At MIT, he teaches the Architecting Software Systems (MIT 1.125) and Engineering Computation and Data Science (MIT 1.00/1.001) courses.

In data engineering and data science, his early work included simulation of Ford's global network, analysis of SAP smart grid billing system. For Altria, he analyzed the performance of item level tagging and also their implementation of an anti-counterfeiting system using the Electronic Product Code (EPC).

In password security, Prof. Williams was PI that developed the algorithms for a negative password authentication system for the Intelligence Advanced Research Projects Activity (IARPA) agency.

Prof. Williams advises companies in the Americas, Europe, Middle East, and Asia.

“In a world where AI is becoming the new baseline, the companies that thrive will be the ones that automate the routine, elevate human creativity, and redefine what’s possible.”

- Digital Transformation: From AI and IOT to Cloud, Blockchain, and Cybersecurity

Dr. Abel Sanchez

Executive Director of MIT's Geospatial Data Center, Research Scientist; Center for Complex Engineering Systems, Sociotechnical Systems Research Center, under Schwarzman School of Computer Science

Dr. Sanchez holds a Ph.D. from the Massachusetts Institute of Technology (MIT). He is the Executive Director of MIT's Geospatial Data Center (GDC). His areas of specialty include the Internet of Things (IoT), Big Data, Cybersecurity, and Digital Innovation. He teaches graduate courses in Data Science, Cybersecurity, and Innovation. For the past eight years, his research has focused on architecting large-scale computation.

In IoT, Dr. Sanchez led the global network architecture for the Internet of Things at MIT. The design addresses large-scale computation. Compared to the largest numbers in the world, 2 billion computers, 7 billion phones, and 7 billion people, IoT is orders of magnitude bigger. In similar work, Dr. Sanchez directed simulation of the U.S. critical infrastructure with the National Infrastructure Simulation and Analysis Center (NISAC).

In data science, his early work included supply chain information engineering, analytics, simulation, and visualization with Wal-Mart, Kraft, and SAP. Dr. Sanchez extended his work to global anti-counterfeiting efforts with Johnson & Johnson, SAP, and Altria. By helping Altria scale track-and-trace using the Electronic Product Code Information Services standard from RFID, the work produced a global infrastructure used by industry and government to this day.

In enterprise computing, Dr. Sanchez led the design of a global data infrastructure simulator, modeling follow-the-sun engineering, to evaluate the impact of competing architectures on the performance, availability and reliability of the system for Ford Motor Company. The simulator modeled user actions, applications, background processes, network load, servers, storage, and global data centers. The work identified data center reductions opportunities estimated at a billion dollars in savings.

In cyber security, Dr. Sanchez directed impact analysis of large-scale cyber-attacks designing Cyber Ranges for the Department of Defense (DOD). Conducting repeatable experiments in impact analysis and the ability to model the cyber environment in a highly portable fashion. Looking at the insider threat Dr. Sanchez led the DOD security study on Enterprise Resource Planning systems across the United States Armed Forces.

In password security, Dr. Sanchez led the design of a password firewall (negative authentication) for the Intelligence Advanced Research Projects Activity (IARPA) agency. The Negative Filtering or Negative Authentication (NA) approach utilizes a form of complement profiles which resembles the censoring and maturation process of T- cells in the immune system.

“In a world overwhelmed by data, Generative AI bridges the gap, turning information into insights and making data-driven decisions accessible to all.”

Prof. Armando Solar-Lezama

Professor in MIT's Department of Electrical Engineering and Computer Science; Head of Computer-Assisted Programming Group and Associate Director and COO of MIT Computer Science and Artificial Intelligence Laboratory

"Code is such a powerful and expressive mechanism for describing the world and how things work."

Armando Solar-Lezama is a Professor in MIT's Department of Electrical Engineering and Computer Science. He is the Associate Director and COO in the Computer Science and Artificial Intelligence Laboratory (CSAIL), where he leads the Computer Assisted Programming Group. Solar-Lezama and his research group focus on program synthesis, a research area at the intersection of programming systems and artificial intelligence.

He is currently the lead PI of the NSF funded Expeditions project "Understanding the World through Code" and is also the founder of playskript.com, an online platform for creating interactive presentations. Solar-Lezama earned a PhD from University of California, Berkeley.

Jacob DePriest

Deputy Chief Security Officer

“Developers create world changing innovations every day and yet they still spend a large amount of time creating boilerplate code, tests, fixing security issues, and writing documentation. AI is already accelerating these tasks for developers today and it will continue to help developers around the world focus on the most meaningful work.”

Jacob DePriest is the VP, Deputy Chief Security Officer at GitHub where he is responsible for managing the GitHub Security team. Prior to GitHub, Jacob was a senior executive at the National Security Agency where he built and led the Developer Experience program, was the Agency’s executive sponsor for open source, and led a number of IT and security transformation initiatives.

DePriest counts on over 15 years of experience as an engineer in the field of cybersecurity, cloud architecture, and organizing technical teams.

Susan Doniz

Chief Information Officer and Senior Vice
President of Information Technology and
Data Analytics

Susan Doniz is the Chief Information Officer of The Boeing Company and Senior Vice President of Information Technology & Data Analytics, where she leads all aspects of information technology, information security, data and analytics.

She also supports the growth of Boeing's business through IT and analytics-related revenue-generating programs. Doniz is a member of the company's Executive Council.

Before joining Boeing in 2020, Doniz was the Group CIO of Qantas Airways, where she expanded the airline's digital ecosystem and adopted new technology to support the needs of the business and its customers.

Previously, during a 17-year career at Procter & Gamble, she led IT and Analytics programs in support of sales, research and development, the supply chain, as well as a cross-functional program to digitize the company.

Doniz also worked at SAP, where she was a strategic adviser to the global chief executive officer on transformation and technology issues in support of customers, and Aimia.

Katie M. Lewis

Generative AI Researcher at Runway

Katie M. Lewis received her PhD from MIT in Developing Domain-Specific Generative Models.

As a Research Assistant, she developed the GIST method to generate fine-grained image-specific text descriptions using LLMs.

She also developed a learning-based method to align sparse, clinical MRI brain scans with higher accuracy on 92% of subjects and 100x faster on the CPU.

Some of her generative machine learning publications include *At the Intersection of Conceptual Art and Deep Learning: The End of Signature*, *Generating Image-Specific Text for Fine-grained Object Classification*, and *Machine Learning for Healthcare* (ML4H) at Neur IPS 2018.

She recently defended her dissertation under the supervision of John Gutttag and Frédo Durand and has interned twice with Ira Kemelmacher-Shlizerman's team at Google.

Mark Schwartz

CIO and Enterprise Strategist

Mark Schwartz is an award-winning CIO currently working as Enterprise Strategist at Amazon Web Services, where he helps senior executives from some of the world's largest companies to formulate strategies and overcome impediments to succeeding in the digital era.

Mark Schwartz is also an accomplished author and his most recent work titled *Adaptive Ethics for Digital Transformation* touches on how the act of digital transformation requires a change in the moral outlook and ethical assumptions of a business.

In 2010, Mark Schwartz was named one of the Premier 100 IT Leaders by *Computerworld Magazine* for his contribution in technology leadership, innovative ideas, and effectively managing IT strategies.

How This Program Empowers You in Your Role

Francisco Castro Santos Marketing Manager at Apliqo

"The biggest value I'm taking out of this course really is the speed I now acquired to prototype ideas, validate concepts, and my new-found ability to improve processes. The course allows me to look around me and start identifying ways of accelerating and improving things."

Nigel Brown Managing Director at QUAY BUSINESS ASSOCIATES LIMITED

"I am thinking about how I can use AI to solve the business problems that I regularly face in the turnaround/recovery projects that I work on."

Arun Abdul Majeed Director at Digital Network & Security at Microland Limited

"I began to see things from a new perspective, especially the potential to build more efficient and intelligent business models. My professional network expanded, and I now confidently engage in AI-related discussions, often contributing valuable insights."

Armando Harka Solutions and Data Architect at Touro University

"Feeling more confident on practicing GenAI concepts tools and frameworks on the daily basis. Coming up with initiatives for using GenAI on Enterprises Digital Transformation."

Brian Moore RTX CORE Principal & SAFe gSPCT at RTX

I am now more confidently leaning into to the discussions at my company about AI strategy and am leading the discussion about how our lean-agile operating system can/should be the means by which we integrate AI into the processes by which we create, make, and market our products.

Join a Diverse, Global Network of Professionals

Participants in our Applied AI program represent a broad mix of industries, job roles, and countries, reflecting the truly global and cross-sector nature of this technology.

Certificate of Completion

All participants who successfully complete the Applied AI for Digital Transformation course will receive a MIT Professional Education Certificate of Completion.

In order to obtain CEUs, participants must complete a required CEU confirmation form. CEUs are calculated based on the number of learning hours in each course.

The Continuing Education Unit (CEU) is defined as 10 contact hours of ongoing learning to indicate the amount of time they have devoted to a non-credit/non-degree professional development program.

To understand whether or not these CEUs may be applied toward professional certification, licensing requirements, or other required training or continuing education hours, please consult your training department or licensing authority directly.

About MIT Professional Education

MIT Professional Education fosters the development of innovative leaders equipped to address complex problems globally

MIT Professional Education provides continuing education courses and lifelong learning opportunities for science, engineering, and technology professionals at all levels, from around the world. Worthy of note is that **MIT professors and lecturers lead and teach all MIT Professional Education offerings**. Some of our programs have a long history. Others are relatively new.

Our Digital Plus Programs go beyond online, blending innovative content delivered using the best of online technology and traditional classroom instruction in a flexible, collaborative learning environment.

MIT Professional Education is central to MIT's vision. It fulfills the mandate to connect practitioner-oriented education with industry and incorporate industry feedback and knowledge into MIT education and research.

The Institute is committed to generating, disseminating, and preserving knowledge while working with others to apply this **knowledge for the benefit of humankind**.

Bhaskar Pant

Executive Director of MIT Professional Education

"MIT Professional Education's goal is to make education accessible to everyone everywhere. We welcome everyone who wants to advance in their career or grow their business to unite and be part of the MIT Professional Education all-inclusive community."

Corporate Courses

At MIT Professional Education, we are committed to accompanying organizations as they aspire to provide their professionals with the ongoing education critical for **success in today's competitive environment**. That's why we offer plans for companies who wish to train their professionals with us.

Which program best suits your organization's needs?

1

Standard Program:

Teams or groups of at least 10 people will obtain special conditions in their registration for any of our programs.

2

Custom Programs

Custom-made to meet the specific needs of each organization and its professionals.

3

Private Cohorts:

Available in Open Enrollment courses with a minimum of participants.

For more information on our Programs for Organizations, please contact us at: [**professionalprograms@mit.edu**](mailto:professionalprograms@mit.edu)

The Beyond Online Methodology

MIT Professional Education is revolutionizing the digital learning experience. Infact, we are no longer talking about online-only, but rather an interactive and collaborative learning experience that's digitally powered: a Beyond Online experience.

You will have access to one of the most innovative e-learning platforms that utilizes the latest technology. You will also have an opportunity to meet and work with some of the world's leading subject matter experts in their respective fields.

With MIT Professional Education, you'll have an opportunity to:

- Attend select live webinars with MIT Instructors.
- Collaborate and engage with world-renowned MIT Instructors.
- Learn from expert learning facilitators, guest speakers, and subject matter experts from industries.
- Weekly live webinars from learning facilitators.
- Fulfill your reskilling and upskilling needs in this fast- changing environment.
- Master the technical and human skills necessary for effective leadership.
- Meet and network with other program participants from all around the world.

Clara Piloto

Senior Director of
Global Programs,
Digital Plus
Programs, and
Corporate Programs

"Generative AI is more than just a technological advancement—it's a transformative force that is reshaping industries, redefining innovation, and changing the way we tackle global challenges. The real power of AI lies not only in its ability to automate tasks but in unlocking new possibilities for creativity, problem-solving, and driving meaningful impact. At MIT Professional Education, we empower professionals to harness this groundbreaking technology with purpose, equipping them with the tools, insights, and skills to lead the AI revolution and use it as a force for good. The future belongs to those who can navigate this rapidly evolving landscape and leverage AI to build solutions that make a real difference."

Benefits of Joining the Professional Alumni Community

MIT Professional Education offers a number of benefits for participants who successfully complete our courses:

- 1** Digital Certificate of Completion and MIT CEUs*.
- 2** 15% benefit for online programs and short-duration, in-person programs offered by MIT Professional Education.
- 3** Access to the virtual campus for 6-months after program completion.
- 4** Exclusive access to the MIT Professional Education Alumni LinkedIn group, connecting you with a global network of fellow MIT Professional Education alumni

*To obtain CEUs, complete the accreditation confirmation, which is available at the end of the course. CEUs are calculated for each course based on the number of learning hours.
